

Warning: Hardware changes can void Security Settings!

Major hardware changes and operating system upgrades can negate software security settings and passwords in some FastCAM software products.

We use several methods of security for different products and we also have strict licensing and pirating control policies in place.

Security Key Products

One anti-piracy method we use is the physical hardware lock or 'dongle'. The software will only run when it finds the dongle attached to your PC. There are two types of holders. The 'block' shape is for computers with parallel ports. The longer shape (shown) is for newer computers and laptops with USB ports.

FastCAM programs that use a physical hardware lock or dongle are:

- ▶ **FastCAM®** ▶ **FastPLOT™** ▶ **FastNEST®** ▶ **FastSHAPES®** (when sold with FastCAM or purchased as a Full Set - see below for individual web download versions) ▶
- FastTRACK®** ▶ **FastCOPY®** ▶ ***FastLINK™**

Changes to your network card or any other internal hardware, upgrading your operating system etc should make no difference. If you buy a complete new PC then just make sure that you remove the dongle from the old PC and attach it to the new one.

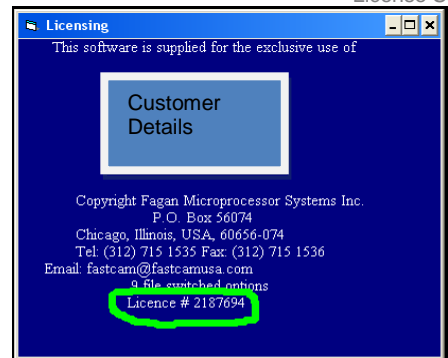

You can purchase a new USB style dongle from us but you will need to return your old one.

Note: *FastLINK™ has two versions - one uses a dongle and the other a password. This product is not compatible with USB technology.

Password Protected Products

Another type of security control is the use of Activation and Registration Codes (Passwords). These codes are keyed in when you first install and purchase the program. They are stored in memory and invisible to the user. Many popular desktop applications today use this type of anti-piracy protection. Some passwords are linked to the unique 'footprint' of a PC. Consequently, major hardware changes and operating system upgrades can sometimes cause problems.

All programs purchased over the web are password protected.

FastCAM programs that use password protection are:

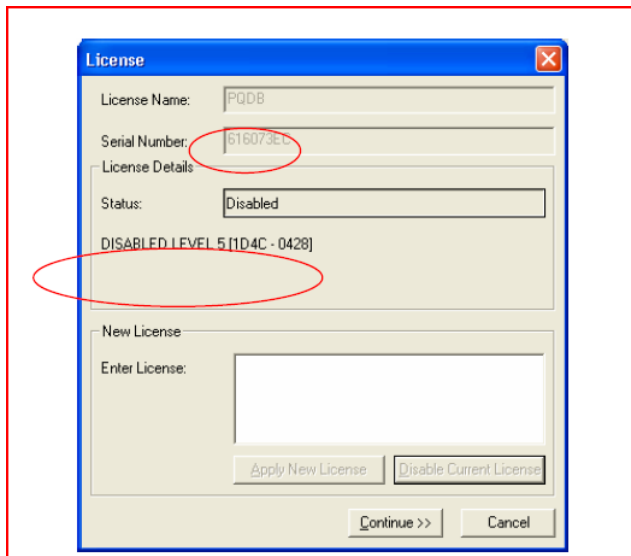

▶ FastCAM® QE™ ▶ FastCUT® ▶ FontGEN ▶ Outline ▶ Tradesman in a Box™ ▶

FastBEAM™ ▶ FastSHAPES® (purchased as Individual Programs e.g. Cone, PBranch, Rectircle etc)

If you have any Password Protected Programs you need to DISABLE the licensing program before you make major changes to your PC!

If you have a product that uses Password Protection and are making major changes to your internal hardware (including changing network cards), you must first disable the licence. (If you are experiencing problems when routinely using USB's and broadband modems, mobile phones and other external devices, contact FastCAM).

To run the Disable Program, hold down the Shift key and Run the Program. A license screen should appear (shown). Click the Disable License Button. Keep a record of the Serial number and the Disable Number (or keep a screen shot). Reinstall the program* after you've made your hardware changes and go through the installation process as prompted. Email fastcam@fastcam.com your serial number+ Disable Number (as previously recorded) + your new serial number generated after your hardware changes. You will then be emailed back your new password. **If you purchased online, you will need to go back through the Ordering->Paypal Download page. Click Buy Now. Go through Step 1 only.*
